

AuditorsDesk's audit management software has now been integrated with SAP.

February 6, 2021 - AuditorsDesk, developer of India's most trusted audit management software, today announced that users can now work with SAP directly from the software. We are eliminating the need for dual data entry, thus saving your time and effort for acute cost. Each time data is manually entered into the audit management software, there is the chance of errors being introduced. Data passes through a validation layer, resulting in a decrease in costly errors and chargebacks.

Benefits of SAP integration

- Reduce implementation and operating costs
- Lower risks by leveraging your development investment
- Reduce the cost of integrating applications by limiting complex point-to-point connections
- Achieves higher business efficiency
- Improves customer support standards

"I like the vast features it offers and provides a platform to automate and manage the end to end process of an audit from start to end. I also like the diverse options it provides in integration like SAP." said Himanshu Khanna, AuditorsDesk user.

About AuditorsDesk: Auditors Desk is a cloud-based end-to-end audit platform that helps chartered accountants and audit teams perform efficient audits and reviews. Our audit automation tools manage audit planning, compliance management and risk assessment on cloud-based storage with utmost security and encryption.
